

PROCHEM.

ProCaps Low Moisture Encapsulation Cleaning Machines

Prochem's advancements in encap cleaning equipment and solutions allow cleaners to maintain that "like new" look year around. When done correctly with the right tools and solutions, low-moisture encap cleaning can greatly reduce the need for regular steam cleaning of carpets. Because carpets are dry in under 30 minutes, encap cleaning is the perfect choice for interim cleaning in high-use areas. Encap cleaning with Prochem Procaps machines is as easy as daily vacuuming but is much more effective than traditional carpet maintenance systems. For best results use with Chemspec's [EncapBrite](#) products.

FEATURES

- Counter-rotating brush cleans all sides of fiber
- Unique, easy-to-clean debris bin
- Easy to replace brushes with wear indicator
- Ergonomic design with comfort grip handles
- Procaps Deluxe Machine includes solution tank with 50 PSI electric pump for convenient application.
